BUSINESS PROPOSAL

A complete e-commerce system for your business.

A dedicated, customized online shop built for your store and owned by your business.

A dedicated online shop for your business.

RazeStore provides a customized e-commerce system intended to help your shop establish an online shopping experience and manage its business operations from one place.

This proposal explains what the system delivers, how it is delivered, and what your business receives on completion. It is written for business owners, not developers.

What this system provides

- Online storefront
- Product presentation
- Shopping cart and checkout
- Order management
- Payment processing (where configured)
- Inventory management
- Business reporting
- Agreed integrations

WHAT MAKES THIS DIFFERENT

A dedicated deployment, not a shared rental.

RazeStore is not a monthly subscription to a shared shop platform. Each RazeStore system is customized for one business and deployed for that business alone. Your domain, your hosting account, your business data and your administrator access belong to you. Ownership and transfer arrangements are documented in the purchase agreement.

Running a shop through many tools at once.

Selling online often begins with WhatsApp, social media and in-person visits. Each of these works, but together they create small daily frictions that add up over time.

The challenges below describe the everyday patterns shop owners commonly describe. Not every business experiences all of them, and the scale differs from shop to shop.

01 **Orders spread across many channels**
A customer messages on WhatsApp, another comments on a Facebook post, and a third sends a direct message on TikTok. Each request sits in a different app, and confirming which orders are still open becomes guesswork.

02 **Manual payment verification**
A customer says they have sent money, then sends a screenshot. You open your M-Pesa statement, compare the amount, match the reference, and reply. This repeats many times a day.

03 **Stock counted in the owner's head**
One product may have sold on WhatsApp, another on Instagram, and a third in person at the shop. When the numbers live in different places, the same item can be sold twice before anyone notices.

04 **Orders and requests hard to follow up**
Without one place listing every order, it is easy to forget who is waiting for delivery, who asked for a refund, and who has already been served.

05 **Limited view of what is selling**
At the end of the week, it is difficult to say which products moved fastest, which channel brought the most customers, and where money is going — because the information is scattered.

WHY THIS MATTERS

A connected shop system brings products, orders, payments and reporting into one place. The next pages explain how the customer shopping experience, the shop management experience and the delivery process are structured in RazeStore.

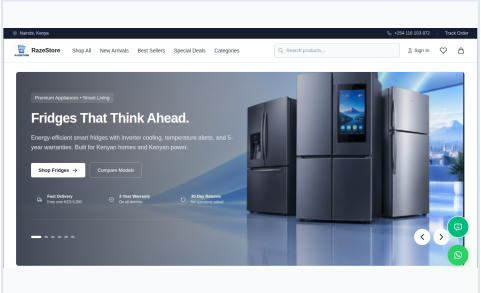

What a customer sees when they visit your shop.

From first visit to placing an order, the customer journey is designed to feel familiar. No account is required to browse, and every step is a single click away.

The screenshots below show the real RazeStore storefront, using demonstration data for illustration.

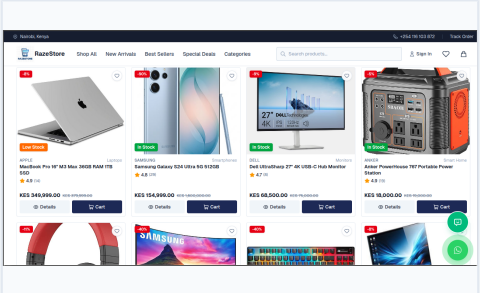

THE CUSTOMER JOURNEY

1	2	3	4	5	6	7
Opens the shop	Browses products	Views product details	Adds items to cart	Proceeds to checkout	Selects payment method	Places the order

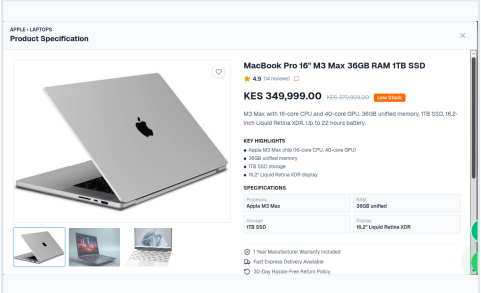

The storefront homepage

Customers arrive on a branded shop, not a marketplace.

Product listing

Products organised by category, with images and prices.

Product details

Photos, description, price and add-to-cart in one view.

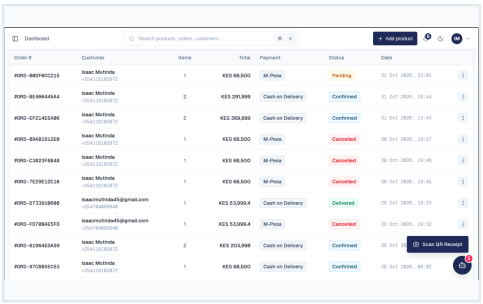

WHAT THIS MEANS

A customer can find what they need, understand pricing and place an order without leaving the shop or contacting the owner to confirm availability. Payment options available at checkout are confirmed with you and enabled once configured and tested.

Manage your shop from one place.

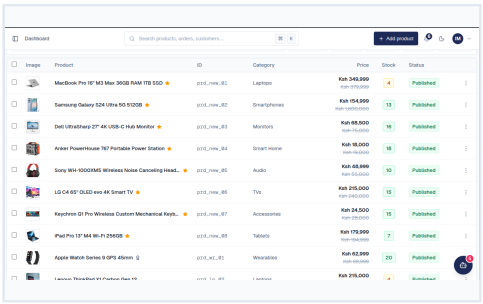

Behind the customer storefront, RazeStore provides an administrative area where the shop owner handles orders, products, stock and business activity.

The screenshots below show the real admin interface, using sample data for illustration.

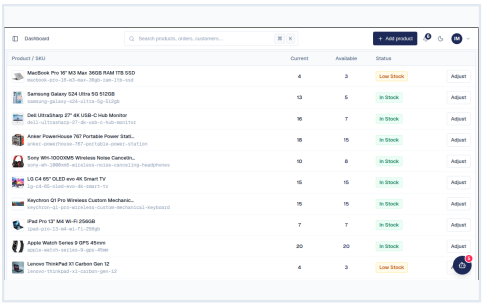

Orders

Every incoming order in one list, from new to delivered.

Products

Add, edit and organise products with images, prices and categories.

Stock

Current stock levels, with clear visibility of what needs attention.

Business overview

Order status summaries, business insights across modules, and activity reporting are available inside the admin, so you can see how the shop is performing without compiling figures by hand.

Also included

- Category management
- Customer records
- Banner management
- Shipping zones
- Returns handling
- Discounts & promotions
- Customer reviews
- Newsletter campaigns

WhatsApp Business, TikTok Business and other social integrations become active once the required API access, credentials and configuration are completed during Phase 2 of the delivery.

A clear payment step at checkout.

M-Pesa is the most widely used payment method in Kenya. RazeStore supports it at checkout once configured with your business's own M-Pesa credentials and account details.

The flow is simple for the customer, and every step leaves a trace you can follow in the admin.

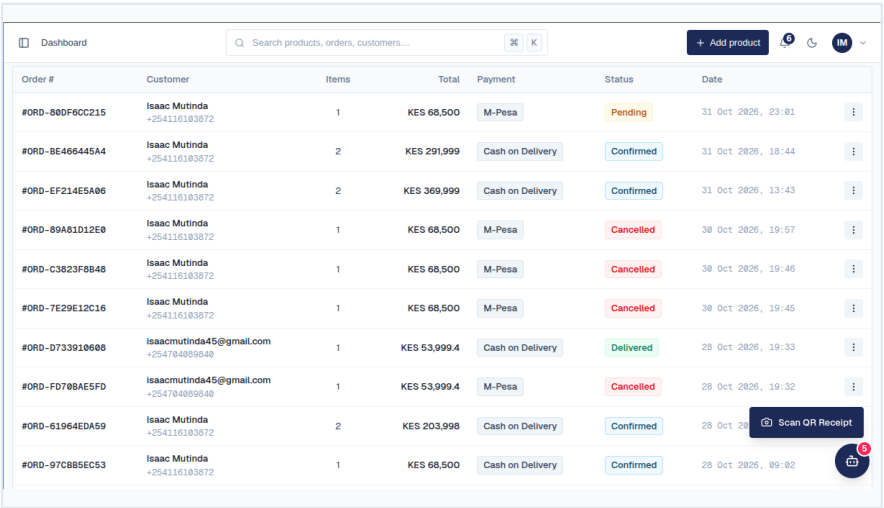

THE PAYMENT FLOW

1	2	3	4	5
Order placed	M-Pesa selected	Request to phone	Customer approves	Order updated

ON SUCCESS

Payment confirmed

Once the payment provider confirms the transaction, the order moves forward with a verified status. Both you and the customer see the same information — no more manually matching screenshots to orders.

Order status overview, using demonstration data.

Every order, one list

Each order carries a status that reflects where it currently is — from placed, through paid, to delivered.

Failed or cancelled attempts remain visible, so nothing is silently lost. You can decide what to do with each one.

For orders still awaiting payment, a reminder can be issued directly to the customer.

CONFIGURATION

M-Pesa checkout is enabled once your business's Daraja API credentials and a matching paybill or till account are provided and tested. Until then, the rest of the shop is fully functional and payments are configured during Phase 2 of the delivery phases described later in this proposal.

From purchase to handover, in three phases.

Every RazeStore project follows the same three-stage sequence. Each phase has a defined scope, a clear outcome, and a payment milestone that becomes due when the phase is complete.

No integration is treated as active until it has been configured with your own credentials and tested with real data.

PHASE ONE
01

Customization and launch

After the initial deposit, the system is customized for your business. Branding, product information and the agreed core shop are prepared and deployed live on your domain.

- Agree on branding, colours and layout
- Populate products with agreed pricing and images
- Configure the storefront and shop structure
- Deploy the core shop live

OUTCOME

Online shop live on your domain

PHASE TWO
02

Integrations and configuration

The necessary access, permissions and credentials are obtained, and the agreed external integrations are configured, connected and tested.

- Obtain API credentials and account access
- Configure agreed payment integrations
- Connect and test social and messaging integrations
- Confirm functionality with live testing

WhatsApp Business, TikTok Business and other agreed social integrations become active in this phase, once the required credentials are configured and tested. External provider approval times depend on those providers.

OUTCOME

Integrations connected and verified

PHASE THREE
03

Final verification and handover

The complete system is checked against the agreed scope, then handed over together with the agreed ownership, accounts and access.

- Verify the agreed functions are working
- Provide administrator training
- Transfer agreed account access and ownership
- Final handover and completion

OUTCOME

System handed over — three months free management begins

TIMING NOTE

Delivery timelines depend on the agreed scope, on how quickly the necessary products and credentials are provided, and on external provider approvals. A specific timeline for each phase is confirmed with you in writing before work begins.

ONE-TIME SYSTEM INVESTMENT

KES 200,000

A single payment plan across three milestones. No monthly RazeStore rental, no per-order commission.

PAYMENT MILESTONES

60,000 + 80,000 + 60,000 = 200,000

01	INITIAL DEPOSIT At the start	**60,000** KES	Confirms the project and begins Phase 1 — customization, product setup and deployment of the core shop.
02	WORKING DEMONSTRATION At the live demo	**80,000** KES	Due once the shop is live and you have reviewed a working demonstration of the agreed core features.
03	FINAL PAYMENT At handover	**60,000** KES	Due on completion of Phase 3 — final verification, administrator training and agreed handover of access.
	TOTAL		**KES 200,000**

Separate from the investment

The following costs are not part of the KES 200,000 and are paid directly to the providers involved.

Domain renewal	Renewed through your domain registrar
Hosting	Paid to your hosting provider
M-Pesa transaction charges	Charged by Safaricom per transaction
Third-party subscriptions	API or service fees charged by those providers
Work outside the agreed scope	Quoted separately if requested

WHAT IS INCLUDED

The KES 200,000 covers customization, deployment, agreed integrations, testing, administrator training and handover, plus three months of free management support after completion. Exact inclusion in each phase is confirmed with you in writing before work begins.

Your business. Your shop. Your control.

RazeStore is not a monthly subscription or a shared shop platform. Each RazeStore system is customized for one business and deployed for that business alone.

After handover, the shop, the business data and the agreed account access belong to you.

WHAT YOU CONTROL

Dedicated customized deployment
A shop customized for your business and deployed for you alone — not a shared slot on a platform with other shops.

Your own business domain
Control of the agreed domain that points to your shop.

Hosting account and business data
Control of the hosting account and of the business data your shop records.

Administrative access
Agreed administrator access to manage your own shop.

Your own connected business accounts
WhatsApp Business, TikTok Business and other external accounts remain yours and stay under your control.

INCLUDED

3 months

free management after handover

Covers agreed technical support, troubleshooting, bug fixes and routine assistance for three months after final handover. Continued management after the three-month period can be arranged separately.

Not included: new features, redesigns, product uploads beyond the agreed scope, or ongoing development. Any additional work is quoted separately.

SEPARATE FROM OWNERSHIP

Paid directly to providers

Domain renewal
Renewed periodically through your domain registrar.

Hosting
Paid to your hosting provider directly.

M-Pesa transaction charges
Charged by Safaricom per transaction.

Third-party subscriptions
API or service fees set by those providers.

OWNERSHIP TERMS

Ownership and transfer arrangements are documented in the purchase agreement. Source-code transfer is not implied. Any shared third-party service remains governed by the terms of the provider that operates it.

Let's discuss your online shop.

There is no obligation to proceed. The first conversation is simply an opportunity to describe your shop and hear how the system would fit.

Most shop owners find the WhatsApp conversation is enough to know whether RazeStore is right for them.

FROM CONVERSATION TO LAUNCH

01
Contact RazeStore
Discuss your business and what you need the shop to do.

02
Confirm the scope
Agree on the features, integrations and delivery expectations.

03
Review the arrangement
Confirm the payment milestones and the three delivery phases.

04
Begin the project
Once the agreed initial deposit is made, customization begins.

START THE CONVERSATION

Reach RazeStore directly.

WhatsApp is the fastest way to reach us — and the one most shop owners use.

THANK YOU

Thank you for considering RazeStore. This proposal is a starting point for a conversation — nothing in it is a commitment on either side until both parties have agreed the scope in writing.
